Automated phoropter
CV-5000
Topcon’s CV-5000 automatic phoropter is the heart of your refraction system. The CV-5000 offers various operation interfaces such as a Topcon KB-50S controller, a tablet, an integrated PC in the CV-5000 or an external PC.

The CV-5000’s automatic phoropter head provides fast and silent lens rotation for user and patient comfort.

The CV-5000 is connectable to other refraction instruments. Data import and export can be done through a direct connection with these instruments, or through database software, such as Topcon IMAGEnet i-base.
CV-5000 phoropter
» Small & compact design
» High speed lens disc rotation
» Near vision LED illumination
» Tilting function for near vision test

Small & compact design
The open and compact design allows perfect interaction with your patient.

High speed lens disc rotation
Efficient lens disc rotation reduces ocular stress as well as confusion for the patient. The total refraction is reduced significantly.

Versatile auxiliary lens pack
A variety of available auxiliary lenses ensures a professional subjective refraction examination.

Near vision LED illumination
LED illumination from the CV-5000 phoropter provides bright illumination of the near test chart. The use of external illumination is no longer required.

Tilting function for near vision test
To provide a natural and comfortable reading position during the near test, the CV-5000 phoropter can be tilted within a wide range.

CV-5000 operation
» KB-50S, 1-dial control
» Mouse & monitor control
» CV-tablet control, wireless operation by tablet
The KB-50S is a dedicated controller for the CV-5000 phoropter. This controller enables an easy and intuitive operation of the CV-5000. The buttons are ergonomically placed with a 1-dial button in the centre of the KB-50S, combined with a large LCD touch screen.

Large 10.4” colour LCD touch screen
The large colour screen provides clear display of examination data. All relevant data, such as lens meter data, objective data, can be viewed at a glance.

The touch screen ensures quick and easy access of various refraction functions.

Personalised display lay-out
The KB-50S incorporates all the charts which are available in all Topcon Computerised Chart systems, such as CC-100XP. Depending on your personal preference and depending on the selected Computerised Chart System, test charts are displayed on five tab pages. The lay out of these five tab pages can be defined by the user.

Pre defined examinations
The KB-50S provides pre-defined examinations to correct the spherical, cylindrical refraction as well as phoria tests and binocular function tests.

1-Dial navigation help
The 1-dial button is used to fine-tune several procedures such as axis rotation, adjusting refractive power etc. The 1-dial navigation helps to indicate the rotation direction of the 1-dial according to the responses of the patient.
The operation software which is controlled by KB-50S can also be controlled by a mouse & monitor. Depending on your wishes, the operation software can be running on your own PC or the operation software can be run from an embedded PC in the power supply of the CV-5000.

Operating software on the integrated PC
The newly designed user interface offers the best in user friendliness. All relevant data, such as lens meter data, objective data, can be viewed at a glance.

Operating software on external PC
Using an external PC, enables you to use other software such as Topcon I-base, which enables you to integrate other refraction and diagnostic instruments such as Topcon fundus cameras or slit lamps.

Integration in IMAGEnet i-base
The CV-5000 / KB-50 software integrates with the IMAGEnet i-base software system. Subjective, objective and lensmeter data can be transferred from the CV-5000 system to IMAGEnet i-base™ and assigned to a patient. As the communication is bi-directional IMAGEnet i-base™ can transfer objective, old glasses and lensmeter data to the CV-5000 system as a starting point for subjective refraction.
CV-TABLET CONTROL

CV-tablet control, wireless operation by tablet
The CV-5000 can be controlled by a tablet. The wireless tablet offers flexible operation within the refraction room. Intuitive operation of the CV-5000 through tablet features, such as sliding and touching the screen.

The CV-tablet control operates in combination with Topcon Computerised Charts Systems, such as CC-100, and CC-100XP. The tablet offers unique wireless control of the CV-5000, as well as controlling the CC-100 or CC-100XP at the same time.

The CC-100 and CC-100XP LCD chart systems are versatile solutions to present charts to patients. The high resolution LCD ensures clear and bright chart display. All commonly known acuity tests are available, including ETDRS. The CC-100XP offers additionally polarisation.
CV-5000 provides a sales support, through which the operator can advice the customer which type of lens is most beneficial to fulfill their needs. Clear images display the view for different lens types, single vision, mid range progressive and full range progressive lenses. Lens type selection is made easier and more time saving.

Vision of progressive Lens

Accomodation

Patient Information
Patients like to know why they need glasses. The animated patient information provides a clear understandings to the patient.
Specifications

Spherical power:
- Measuring range: +27.00 to -27.00D
- Measuring step: 0.25D/3.00D

Cylinder power:
- Measuring range: +6.00 to -8.00D
- Measuring step: 0.25D/1.00D

Cylinder axis:
- Measuring range: 0 to 180°
- Measuring step: 1°/5°/15°

Prism:
- Measuring range: 0 to 20 Δ (all direction)
- Measuring step: 0.1 Δ/0.2 Δ/0.5 Δ/1.0 Δ

Pupillary distance:
- Measuring range: 48 to 80mm
- Measuring step: 0.5mm/1.0mm

Cross cylinder:
- Jackson Cross cylinder: ± 0.25D/± 0.50D
- Auto Cross cylinder: ± 0.25D

Test lens (Aux lens):
- Red-Green filter, Polarizing filter (45°/135°), Prism (Δ Δ/10 Δ), Red Maddox (horizontal/vertical), Lens for retinoscopy (+1.5D/+2.0D), Cross cylinder for measuring presbyopia (± 0.50D), Occluding plate, Pinhole, and Cross hairs glass.

Reference eyeglass:
- Wearing distance:
  - 12mm, 13.75mm, 16mm, 18mm, 20mm

Convergence:
- Near-point distance 40/67cm (Minimum papillary distance at near-point 40cm convergence: 53mm)

Dimensions and weight:
- Measuring head (Non-arm mounted type):
  - Measuring head (Arm-mounted type):
  - Power Supply Unit W/External PC:
  - Power Supply Unit W/Built-in:
  - Dial Controller:
