ADJUSTABLE SPECULUMS

A.G. Russo
J2031.24

Blefarostato regolabile, valve aperte da 14 mm, con alloggiamenti per il posizionamento di cannelli/vie per **infusione e fibre ottiche**

Adjustable speculum, 14 mm open blades, with supports for **illumination and tubing infusion**. Designed by A.G. Russo

J2031

Blefarostato regolabile, leggero, **valve aperte** da 14 mm, anatomiche a **forma di V**

Adjustable speculum, 14 mm **V-shaped** anatomic blades. designed By L. Buratto M.D.

J2031.3

Blefarostato regolabile, **nasale**, valve da 14 mm

Adjustable **nasal** speculum, 14 mm long blade

J2032

Blefarostato regolabile, leggero, **valve piene** da 13 mm, anatomiche

Adjustable, solid blade speculum, for LASIK, 13 mm anatomic **solid blade**. designed By L. Buratto M.D.

J2031.12

Blefarostato regolabile in titanio, **valve aperte** da 13 mm

Titanium adjustable speculum, 13 mm **open blades**. designed by Lieberman M.D.

J2031.13

Blefarostato con regolazione delicata attraverso inserto in peek, **valve anatomiche aperte** da 13 mm, **titanio**

Adjustable speculum, with gentle movement (peek insert), 13 mm **open anatomic blades**, **titanium**

ADJUSTABLE SPECULUMS

J2033
ASPIRATING

Blefarostato regolabile, leggero, con **aspirazione**, valve da 16 mm

Adjustable **aspirating** speculum, 16 mm blades

J2031.21
REVERSE

wider ergonomic blades

Blefarostato regolabile **reverse a valve piene** da 14 mm, in **titanio**. Nuova ergonomia delle valve create senza punti di saldatura sul telaio in titanio monoscocca con sezione piatta. Adatto per la chirurgia refrattiva e di tutto il segmento anteriore

Adjustable speculum, reverse, 14 mm solid blades, **titanium**. New blade ergonomics created without soldering points on titanium monopiece frame with flat section. Suitable for refractive and any anterior segment surgery. Designed by P. Vinciguerra M.D.

J2031.11
REVERSE

Blefarostato regolabile reverse a **valve chiuse** da 15 mm. Nuova ergonomia delle valve create senza punti di saldatura sul telaio in **titanio** monoscocca con sezione piatta. Adatto per la chirurgia refrattiva e di tutto il segmento anteriore

Reverse speculum with 15 mm closed blades, **titanium**. New blade ergonomics created without soldering points on titanium monopiece frame with flat section. Suitable for refractive and any anterior segment surgery

J2031.14
NASAL

Blefarostato regolabile **nasale** in titanio, valve aperte anatomiche da 13 mm

Adjustable **nasal** speculum, 13 mm anatomic open blades

WIRE SPECULUM

J2049

Blefarostato per **neonati**,
valve da 7 mm

Infant size, wire speculum,
 7 mm long blade

J2049.2

Blefarostato per **prematuro**,
con alette e valve chiuse da 5 mm

Wire speculum for **premature infant**, with small flanges, 5 mm long blade

J2049.1

Blefarostato per **prematuro**,
piccolissimo, valve da 5 mm

Premature infant size,
wire speculum, very small,
5 mm long blade

J2049.3

Blefarostato per **neonati**,
con alette e valve chiuse da 8 mm

Wire speculum for **infants**, with small flanges, 8 mm long blade

J2050

Blefarostato colibrì, valve da 16 mm
Wire speculum, 16 mm long blade

J2052

Blefarostato per **bambini**, valve da 13 mm
Child size wire speculum, 13 mm long blade

J2051

Blefarostato colibrì, **valve piene** da 14 mm
Solid blade speculum, 14 mm long blade

J2053

Blefarostato per **bambini**, valve piene da 11 mm
Child solid blade speculum, 11 mm long blade

J2056

Blefarostato, valve da 16 mm
Wire speculum, 16 mm long blade

J2056.1

Blefarostato, **valve aperte e arcuate** da 16 mm
Wire speculum, 16 mm long, **opened and curved blades**

Barraquer
Oosterhuis
J2037

Blefarostato leggero **autobloccante**,
valve chiuse da 14 mm
Speculum light **self-locking**, 14 mm long
closed blades

J2038

Bambini/ Child

lefarostato per **bambini**, **autobloccante**,
valve da 11 mm
Child size speculum, **self-locking**,
11 mm long blades

Prosdocimo
J2037.2

Blefarostato leggero **autobloccante**,
valve aperte, arcuate e bottonute da 16 mm
Speculum lightweight **self-locking**,
16 mm long, open and convex blades

FEMTO SPECULUM

J2031.32 WIDE BLADES

VALVE AMPIE, IDEALI PER OCCHI PARTICOLARMENTE GRANDI / WIDE BLADES, IDEAL FOR BIGGER EYES

Il blefarostato autobloccante dispone di un sistema di allineamento delle valve per mezzo di un sostegno creato in zona temporale. Tale supporto, permette inoltre di eliminare il peso indotto dal blefarostato stesso sul bulbo del paziente, limitando incrementi indesiderati di pressione intraoculare. Applicato durante una procedura con l'ausilio del laser Lensx® Alcon®, favorisce la fase di docking ed il trattamento

Self-locking speculum with alignment system of the valves by means of a support created in the temporal area. This support, helps to reduce the weight induced by the speculum on the bulb of the patient, thus limiting unwanted increments of the intraocular pressure. It facilitates the docking step in Alcon® Laser Lensx® assisted surgeries making the procedure easier

J2031.33 SMALL BLADES

Atraumatico e **poco invasivo**, consigliato per l'impiego generale in tutti i tipi di occhi

Atraumatic, **non-invasive**, suggested for general use in all eyes. designed by P. Crozafo® M.D.

J2007

Blefarostato con **valve aperte** da 15 mm.
Consigliato per uso diagnostico e chirurgico.
L'ampio telaio permette facilmente il
posizionamento e la rimozione sul paziente

Wire speculum 15 mm long blade with large
frame. Recommended for diagnostic and surgical
procedures. The wide frame allows easy
placement and removal

J2040
REVERSE

Blefarostato con **valve aperte** da 15 mm.

Reversible, nasale-temporale. Consigliato per
uso diagnostico e chirurgico. L'ampio telaio facilita
il posizionamento e la rimozione sul paziente

Reverse wire speculum 15 mm long blade with
large frame. Recommended for diagnostic and
surgical procedures. The wide frame allows easy
placement and removal

RING SCISSORS

	COD	A	B	Descrizione	Description

COD	A	B	Descrizione	Description
J1323	125	35	da enucleazione, molto curva, smussa	enucleation scissors, very curved, blunt tips

J1542

Forbice **congiuntivale**, curva, **smussa**, lame da 10 mm

Conjunctival scissors, curved, 10 mm long blades, **blunt tips**

J1540

curva, **acuta**, lame da 10 mm

curved, 10 mm long blades, **pointed tips**

J1546

Forbice **congiuntivale**, piccola, curva, **smussa**, lame da 8 mm

Conjunctival scissors, curved, 8 mm long blades, **blunt tips**

J1502

Forbice corneale, poco curva, smussa, **lame da 9 mm**

Corneal scissors, slightly curved, **9 mm long blades**, blunt tips

J1506

lame delicate da 7 mm

7 mm long, delicate blades

J1600

Forbice corneale, curva, smussa, lame delicate da 6 mm, **destra**

Corneal scissors, curved, 6 mm delicate long blades, blunt tips, **right**

J1602

sinistra

left

J4210

Micro forbice corneale, delicata, **retta, smussa**, lunghezza lame da 7 mm

Corneal scissors, delicate, **slightly straight**, 7 mm blunt tips

J4211

curva, smussa, lunghezza lame da 7 mm

slightly curved, 7 mm blunt tips

J4200

Micro forbice per iride, **retta, smussa**, lame da 6 mm

Iris scissors, **straight**, 6 mm long blades, blunt tips

J4201

curva, smussa, lame da 6 mm

curved, 6 mm long blades, blunt tips

J1550

Forbice per iride, **retta, acuta**, lame delicate da 4 mm

Iris scissors, **straight**, 4 mm long, delicate blades, pointed tips

J1552

curva, acuta, lame delicate da 4 mm

curved, 4 mm long, delicate blades, pointed tips

J1559

Forbice per capsulotomia, **curva, acuta**, lame da 5 mm

Capsulotomy scissors, **curved**, 5 mm long blades, pointed tips

J1559.1

Forbice per capsulotomia, **curva, smussa**, lame da 6 mm

Capsulotomy scissors, **curved**, 6 mm long blades, blunt tips

J4220

Forbice per capsulotomia, **poco curva, smussa**, lame delicate da 7 mm, manico ergonomico

Capsulotomy scissors, **curved**, 7 mm long, delicate blades, **blunt tips**, ergonomic handle

J4221

poco curva, acuta

slightly curved, pointed tips

J4204

Forbice per **capsulotomia**, angolata, **acuta**, lame sottili da 7 mm

Capsulotomy scissors, angled, 7 mm long, thin blades, **pointed tips**

CROSS ACTION MICS CAPSULORRHESIS FORCEPS

INCISIONS

riferimenti sul dorso per la misurazione della ressi / reference marks to gauge the rhexis (5.0 mm - 6.0 mm)

1.3

J3126.8

Pinza capsuloressi per MICS, cross action, manico ergonomico, lunghezza branche 11 mm, apice ovale, per **incisione da 1.3 mm**, titanio

MICS capsulorrhesis forceps, cross action, ergonomic handle 11 mm long oval shaped tips, for **1.3 mm incisions**, titanium. designed by A. Galan M.D.

1.3

J3126.8E titanium version EVOLine

Pinza capsuloressi per MICS, cross action, manico ergonomico, lunghezza branche 11 mm, apice ovale, per **incisione da 1.3 mm**, titanio

MICS capsulorrhesis forceps, cross action, ergonomic handle 11 mm long oval shaped tips, for **1.3 mm incisions**, titanium. designed by A. Galan M.D.

1.7

J3126.7

Pinza capsuloressi per MICS, cross action, manico ergonomico, lunghezza branche 11 mm, per **incisione da 1.7 mm**, titanio

MICS capsulorrhesis forceps, cross action, ergonomic handle 11 mm long tips, for **1.7 mm incisions**, titanium. designed by Inamura M.D.

1.7

J3126.6

Pinza capsuloressi per MICS, cross action, manico ergonomico, lunghezza branche 10 mm, per **incisione da 1.7 mm**, titanio

MICS capsulorrhesis forceps, cross action, ergonomic handle 10 mm long tips, for **1.7 mm incisions**, titanium. designed by Inamura M.D.

2.2

J3126.4 Inamura

Pinza per capsuloressi, manico piatto, branche da 11 mm, apice acuto, per **incisione da 2.2 mm**, in titanio

Capsulorrhesis forceps, flat handle, 11 mm sharp tips, for **2.2 mm incisions**, titanium

acciaio inossidabile/stainless steel

titanio/titanium

combinato (terminale acciaio, manico titanio)/titanium/combined tool (metal tip, titanium handle)

MICS CAPSULORRHESIS FORCEPS CONTROLLED OPENING

J3135.1E Giannetti titanium version EVOLine

Pinza capsuloressi per MICS con apertura controllata, branche 11 mm, apice ovale per **incisione da 1.8 mm**
MICS capsulorrhesis forceps with controlled opening, 11 mm long oval shaped tips, for **1.8 mm incisions**

J3135.1 Giannetti

Pinza capsuloressi per MICS con apertura controllata, branche 11 mm, apice ovale per **incisione da 1.8 mm**
MICS capsulorrhesis forceps with controlled opening, 11 mm long oval shaped tips, for **1.8 mm incisions**

J3135.10 Giannetti

Pinza capsuloressi per MICS, versione standard, **senza apertura controllata**, branche 11 mm, apice ovale, per **incisione da 1.8 mm**

MICS capsulorrhesis forceps, standard version, **no controlled opening safety system**, 11 mm long oval shaped tips, for **1.8 mm incisions**

J3141E Crozafon® titanium version EVOLine

Pinza capsuloressi per faco-microcoaxial con apertura controllata, branche 12 mm, per **incisione da 1.8 mm**
Capsulorrhesis forceps for microcoaxial phaco with controlled opening, 12 mm long tips, for **1.8 mm incisions**

J3141 Crozafon®

Pinza capsuloressi per faco-microcoaxial con apertura controllata, branche 12 mm, per **incisione da 1.8 mm**
Capsulorrhesis forceps for microcoaxial phaco with controlled opening, 12 mm long tips, for **1.8 mm incisions**

J3135.4 Surace

Pinza capsuloressi MICS con apertura controllata, branche 11 mm punte sottili 90°, per **incisione da 2.2 mm**
MICS capsulorrhesis forceps with controlled opening 11 mm long 90° fine tips, for **2.2 mm incisions**.

2.2

J3135.3 Formenti

Pinza capsuloressi per MICS con apertura controllata, lunghezza branche 11 mm, apice ovale per **incisione da 2.2 mm**, manico piatto in **titanio**

MICS capsulorrhesis forceps with controlled opening, 11 mm long oval shaped tips, for **2.2 mm incisions**, **titanium** flat handle

2.0

J3142.2 Giardini

Micropinza capsuloressi per MICS, **apertura max 2.0 mm** / MICS capsulorrhesis forceps, **controlled opening 2.0 mm**

2.0

J3142

Pinza da capsuloressi, per microincisioni sino a 2 mm, con **apertura controllata**, punte molto angolate

Capsulorexix forceps, for 2 mm micro incisions, **controlled opening**, very angled tips

2.0

J3142.1

Pinza da capsuloressi, per microincisioni sino a 2 mm, versione standard, **senza apertura controllata**, punte molto angolate

Capsulorexix forceps, for 2 mm micro incisions, standard version, **no controlled opening safety system**, very angled tips

OVERLAPPING / COAXIAL CAPSULORRHESIS FORCEPS

PIN STOPPER

1.5

J3143E

Pinza capsuloressi per MICS, per incisione da 1.5 mm, con angolazione per **accesso temporale**, lineaEVOLine, titanio naturale
Sistema di sovrapposizione branche. Mantiene costante l'ingombro del fulcro all'interno della piccola incisione evitando stress

MICS capsulorrhesis forceps, for 1.5 mm incision, for **temporal approach**. EVOLine, natural titanium

Overlapping system cross action micromechanism avoids stressing the incision

1.5

J3143.1E

Pinza capsuloressi per MICS, per incisione da 1.5 mm, con angolazione per **accesso superiore**, lineaEVO, titanio blu
Sistema di sovrapposizione branche. Mantiene costante l'ingombro del fulcro all'interno della piccola incisione evitando stress

MICS capsulorrhesis forceps, for 1.5 mm incision, for **upper approach**. EVOLine blue titanium

COAXIAL CAPSULORRHEXIS FORCEPS

(1.0)

23G

J3137.2 ★ BEST SELLER

Pinza per capsuloressi coassiale **23G** per MICS, lunghezza punte 1.3 mm, per **incisione da 1 mm**, manico in **titanio**

MICS coaxial capsulorrhexis forceps **23G**, 1.3 mm long tips, for **1 mm incisions**, **titanium** squeeze handle designed By Vergés M.D.

(1.0)

J3122

Pinza coassiale **21G**, con curvatura anatomica, branche da 1.8 mm, manico in **titanio**

21G capsulorrhexis forceps, coaxial, with anatomic curvature, 1.8 mm jaws, **titanium** squeeze handle

(1.0)

21G/27G TAPERED

J3124.1L Caporossi

Pinza capsuloressi coassiale per MICS, gambo rastremato **21-27G**, apici smussi, per incisione da 0.5 mm

MICS coaxial capsulorrhexis forceps, tapered shaft **21-27G**, blunt tips for 0.5 mm incision

CONVENTIONAL CAPSULORRHEXIS FORCEPS

GRADUATED

J3131 Corydon

Pinza per capsuloressi, angolata, dorso curvo da 12 mm, **graduato**, apice acuto, manico ergonomico

Capsulorrhexis forceps, angled, 12 mm, **graduated**, curved arms, sharp tips, ergonomic handle

GRADUATED

J3131E titanium version EVOLine

Pinza per capsuloressi, angolata, dorso curvo da 12 mm, **graduato**, apice acuto, manico ergonomico

Capsulorrhexis forceps, angled, 12 mm, **graduated**, curved arms, sharp tips, ergonomic handle

GRADUATED

J3132 Galan

Pinza per capsuloressi, molto fine, angolata, dorso curvo da 11 mm, **graduato**, apice acuto, **molto angolato**, manico ergonomico

Capsulorrhexis forceps, very fine, angled, 11 mm, **graduated**, curved arms, sharp, **very angled tips**, ergonomic handle

GRADUATED

J3132E Galan titanium version EVOLine

Pinza per capsuloressi, molto fine, angolata, dorso curvo da 11 mm, **graduato**, apice acuto, molto angolato, manico ergonomico

Capsulorrhexis forceps, very fine, angled, 11 mm, **graduated**, curved arms, sharp, **very angled tips**, ergonomic handle

J3133 Utrata

Pinza per capsuloressi, angolata, dorso poco curvo da 11 mm, **apice acuto**, manico ergonomico
Capsulorrhesis forceps, angled, 11 mm, slightly curved arms, **sharp tips**, ergonomic handle

J3133E titanium version EVOLine

Pinza per capsuloressi, angolata, dorso poco curvo da 11 mm, **apice acuto**, manico ergonomico
Capsulorrhesis forceps, angled, 11 mm, slightly curved arms, **sharp tips**, ergonomic handle

CONVENTIONAL CAPSULORRHEXIS FORCEPS

J3138 Corydon

Pinza per capsuloressi, leggera, angolata, dorso curvo da 12 mm, apice acuto, in titanio
Capsulorrhesis forceps, lightweight, angled, 12 mm, slightly curved arms, sharp tips, titanium

J3139 Utrata

Pinza per capsuloressi, leggera, angolata, dorso curvo da 12 mm, apice acuto, molto angolato, in titanio
Capsulorrhesis forceps, lightweight, angled, 12 mm, slightly curved arms, strongly angled, sharp tips, titanium

FLAT HANDLE CAPSULORRHEXIS FORCEPS

J3126.1

Pinza per capsuloressi, angolata, dorso curvo da 11 mm, presa con incavo, apice acuto
Capsulorrhesis forceps, angled, 11 mm, slightly curved arms, sharp, notched tips. designed By L. Buratto M.D.

GRADUATED

J3129 Corydon

dorso curvo da 12 mm, graduato, apice acuto / 12 mm long tips, graduated, sharp tips

PRECHOPPERS AND NUCLEUS SPLITTERS

J3644

Pinza per cracking, azione incrociata, branche spatolate, manico ergonomico
Paddle nucleus splitter, cross-action, spatulated tips, ergonomic handle

J3647

Akahoshi prechopper, apertura a 2 mm, azione incrociata, retta, dorso tagliente, per tecnica micro-coassiale
Akahoshi prechopper, cross-action, 2 mm opening, sharp top side blade, for micro-coaxial technique

J3647.2

Akahoshi prechopper, apertura a 2 mm, per nuclei di grado 1-4, apice tagliente, per tecnica micro-coassiale
Akahoshi prechopper, for grades 1-4 nuclei, 2 mm opening, distal sharp top side blade, for micro-coaxial technique

J3647.3 Nijs

Pinza prechopper, apertura a 2 mm, azione incrociata, retta, per tecnica micro-coassiale
Prechopper forceps, cross-action, straight, ergonomic handle, for micro-coaxial technique

J3647.4 Crozafon®

Crozafon® Prechopper **per tecnica Ultrachopper™** con femto laser apertura 2 mm, branche ultra sottili
Crozafon® Prechopper **for Ultrachopper™** and femto laser surgery technique, 2 mm opening, ultra-thin blades

J2192.01A

Separatore e sostenitore del nucleo, curvo, punta smussa. Da usare anche con prechopper J 3647, J 3647.2
Nucleus splitter and sustainer, curved, blunt tip. To be used with the prechoppers J3647 and J3647.2

J2641.33
Cannula per idrodissezione,
Ø 0.50 mm, braccio da 12 mm, curvo e piatto,
apertura sul fronte, a beccuccio

25 G hydrodissection cannula,
12 mm angle to tip,
curved and flat, front opening
designed by Buratto M.D.

J2641.32
Cannula per idrodissezione,
piatta orizzontale, angolata, foro frontale,
Ø 0.50 mm, braccio da 12 mm

25 G hydrodissection cannula,
flat, blunt tip, end opening,
12 mm angle to tip

J2641.7
Cannula per idrodissezione,
piatta verticale, angolata, foro frontale,
Ø 0.40 mm, braccio da 7 mm

27 G hydrodissection cannula,
flat, blunt tip, end opening,
7 mm angle to tip

J2260.4
Cannula per idrorotazione nucleo Ø 0.40 mm,
angolata, con punta ad uncino, foro frontale

Nucleus hydrorotation cannula 27G, angled,
hook-shaped tip end opening
designed by Caporossi M.D.

J2252.1
Cannula irrigante per nucleo, Ø 1.20 mm,
con ansa poco curva, a 3 fori frontali

18 G nucleus irrigating cannula,
slightly curved loop, with 3 front openings
designed by Pearce M.D.

J2255
Cannula per pulizia del sacco capsulare,
Ø 0.50 mm, curva, con punta bottonuta,
sabbata, apertura sul fronte

25 G capsule polisher cannula,
curved, sandblasted, olive tip, end opening
designed by Kratz M.D.

J2256
Cannula per aspirazione
Ø 0.60 mm, curva, lunga,
apertura sul fronte

23 G cortex aspirating cannula,
curved, long, end opening
designed by Charleux M.D.

J2257
Cannula per aspirazione,
Ø 0.60 mm, curva, corta,
apertura sul fronte

flattered tip in the vertical plane

RETRATTORI FLESSIBILI/FLEXIBLE IRIS RETRACTORS

5 PER BOX STERILE

JD4900

Retrattori flessibili, 1
confezione da 5 pezzi, monouso
Flexible iris retractors,
1 pack of 5 hooks, disposable

STERILE EO

J2294.58
Marcatore corneale per marcare sulla cornea i 4
punti di inserzione dei retrattori iridei. Permette
un posizionamento predefinito e replicabile in
grado di dilatare l'iride con forma trapezoidale,
con ampio spazio di manovra in zona distale

Corneal marker to mark on the cornea 4
insertion points of IRIS retractors. It allows a
default positioning and replicable able to dilate
the iris with trapezoidal shape, with ample
room for maneuver in the distal area

ANTERIOR CHAMBER MAINTAINER

J2649.10

Mantenitore di camera anteriore **spatolato** da **23G** (ø 0.6), con scanalature per mantenere la stabilità nell'incisione. Foro inferiore che garantisce una fluidodinamica ottimale in presenza di lenticolo, nei casi di procedura DMEK. L'infusione inferiore riduce al minimo i movimenti indesiderati del delicato lenticolo che possono essere invece provocati da una infusione classica. Disegnato per tecnica DMEK "PULL-THROUGH"

23G (ø 0.6) **spatulated** anterior chamber maintainer, with grooves to improve steadiness. Lower port grants improved lenticle fluids dynamics in DMEK procedures. Lower hole infusion reduces dramatically unwanted lenticle motion which is definitely present with a standard infusion. Designed for DMEK Technique "PULL-THROUGH" by Massimo Busin M.D., Ph.D.

J2649.7

Mantenitore da camera anteriore, **20G**, inserzione atraumatica, autobloccante, titanio

Anterior chamber maintainer, **20G** self-retaining, atraumatic insertion, titanium

J2649.8

Mantenitore da camera anteriore, **23G**, inserzione atraumatica, autobloccante, titanio

Anterior chamber maintainer, **23G** self-retaining, atraumatic insertion, titanium

J2649.9

Mantenitore di camera anteriore da **25G** (ø 0.5) consigliato per procedure DSEK e DMEK

Anterior chamber maintainer, **25G** (ø 0.5) suggested for DMEK and DSEK procedures

J2649.81 SHORT TIP

Mantenitore da camera anteriore, **23G**, inserzione atraumatica, autobloccante, titanio. **SHORT** (terminale da 2 mm)

Anterior chamber maintainer, **23G** self-retaining, atraumatic insertion, titanium. **SHORT** (2 mm length tip)

Mantenitore camera anteriore da **20G**
20G anterior chamber maintainer, self-retaining

JD93769 A/C maintainer

Mantenitore camera anteriore da **23G**
23G anterior chamber maintainer, self-retaining

PRE-OPERATIVE TORIC MARKERS _ PENDULUM SWINGING SYSTEM

I sistemi a pendolo richiedono una corretta posizione del paziente seduto davanti alla lampada a fessura
The pendulum systems device require a correct position of the patient sitting at the slit lamp

J2281.1

Marcatore assiale, per la marcatura asse orizzontale/toriche, consente 4 impronte di marcatura preoperatoria

Axial marker, for horizontal/toric axis marking, allows four pre-operative marking imprints

· With the horizontal axis marker fixed, the toric axis marker can be rotated and fixed at the requested angle with a 5° step mechanism, thus providing in one step both, horizontal and toric axis marking

· Pendulum swinging system assures precise horizontal axis

· One-step marking of 2 axis: horizontal and toric designed by Elies M.D.

J2281.3

Marcatore assiale con mirino di centraggio, asse orizzontale effettuato con impronta epiteliale. Telaio curvo per una migliore visibilità durante la procedura di marcatura

Axial marker with eye centering device, horizontal axis performed by marking epithelium imprint. Curve Shaped for better visibility during the marking procedure designed by Fazio M.D.

J2281

Marcatore assiale manuale pre-operatorio a pendolo, per singolo asse 0-180°, da utilizzare su paziente seduto davanti alla lampada a fessura

Axial marker, for horizontal axis (0-180° limbus marking), for patient seated at the slit-lamp.

Hinge to grant the pendulum to work perpendicular to the ground in any holding position designed by Elies M.D.

J2294.8

Semi anello graduato 0-90°,0-90°, per il riposizionamento delle lenti toriche

Semi-circle marker 0-90°,0-90°, for repositioning of toric lenses. designed by Soler M.D.

rhexis reference spots

J2294.55

Marcatore assiale Torico con misuratore per capsuloressi Ø 5.5 mm.

Da utilizzare con l'anello di Mendez J2294.5 e con il nuovo anello calibrato Ligabue J2294.56

Permette di fissare l'asse torico, lasciando contemporaneamente una precisa marcatura a spot per la ressi

Toric axial marker and capsulorrhexis gauge Ø 5.5 mm.

Recommended use with Mendez ring J2294.5 and new Ligabue gauge ring J2294.56

It allows to fix the toric axis and leaves a precise marking spot simultaneously.

Useful to perform the recommended 5.5 mm capsulorrhexis for toric IOL implantation

designed by E. Ligabue M.D.

J2294.56

Nuovo anello calibrato, con step da 5°, di forma anatomica avvolgente, superiore ed inferiore.

La doppia svasatura conferisce perfetta adesione e minima invasività dovuta all'assenza di spigoli a contatto. La svasatura superiore permette inoltre una più chiara visione anche in occhi piccoli facilitando l'inserimento del marcatore dell'asse torico J2294.55

New gauge ring, with marks each 5°, with double flared upper and lower. The lower flared ring grants minimal invasivity due to the absence of edges in contact with the patient's eye. The upper flared ring allows a clearer and better vision of the 5° marks and significantly improves the insertion of the new toric axis marker J2294.55

designed by E. Ligabue M.D.

J2294.5

Anello graduato a 360°, intra-operatorio, Ø interno 13 mm, Ø est. 18 mm (Da utilizzare con J 2294.6)

360° gauge ring, intra-operative, inner Ø 13 mm, outer Ø 18 mm (To be used with J 2294.6)

designed by Mendez M.D.

J2294.6

Marcatore assiale, intra-operatorio (Da utilizzare con J 2294.5)

Axis marker, intra-operative (To be used with J 2294.5)

designed by Mendez M.D.

INTRA-OPERATIVE TORIC MARKERS

J2294.72

Anello graduato per la marcatura intra-operatoria dell'asse torico. Diametro interno 11.5 mm. Il bordo dell'anello possiede una sezione atraumatica ed ergonomica, studiata per ridurre lo stress dei tessuti oculari durante la sua applicazione. La stessa geometria consente di ottenere un effetto "avvolgente" del bulbo, migliorando la stabilità dell'anello stesso e consentendo una più sicura e precisa marcatura

Gauge ring for intra-operative toric axis marking. Inner Ø 11.5 mm. The edge of the ring has an atraumatic and ergonomically section designed to reduce stress on ocular tissues during the application. The same geometry allows the ring to gently embrace the bulb, improving the stability of the ring and allowing a more secure and accurate marking

J2294.70

Marcatore assiale intraoperatorio con raggi sottili per una facile impronta sull'epitelio da utilizzare con gli anelli J2294.72 e J2294.74

Axial marker with thinner ray. It leaves indentation into epithelium

JCP0003 TORIC IOL SET

BLUNT TIPS

FEMTO REFRACTIVE SMILE® PROCEDURE STROMAL GRAFT REMOVAL FORCEPS

J3168

Pinza con impugnatura classica per rimozione lenticolo in tecnica Smile®
Forceps with classic handle for lenticle removal for Smile® procedure. Designed by Camellin M.D.

J3167L

Pinza coassiale da 23G, per rimozione del lenticolo in tecnica Smile®. Presa seghettata tipo "coccodrillo"

Coaxial forceps 23G for lenticle removal, Smile® technique. Gripping serrated type "crocodile". designed by Rizzo M.D.

STERILE EO

JD3167/5

Pinza coassiale da 23G, per rimozione del lenticolo in tecnica Smile®. Presa seghettata tipo "coccodrillo"

Coaxial forceps 23G for lenticle removal, Smile® technique. Gripping serrated type "crocodile"

SLAK procedures (Stromal Lenticule Addition Keratoplasty)

J3169E

Pinza per SLAK, azione incrociata, per inserzione lenticolo corneale. Disegnata per ogni tipo di chirurgia nell' impianto corneale in procedura additiva intrastromale. Permette di accompagnare, distendere e rilasciare il lenticolo corneale all'interno della tasca intrastromale

The forceps has been specifically designed to facilitate the insertion of corneal lenticule in all the types of corneal intrastromal implantation surgery. The cross-action system allows to grasp and introduces the lenticule through a small incisions (as small as 3.5 mm). Once inserted the forceps is able to spread out and unfold the implanted corneal lenticule within the stromal pocket in one single maneuver. Particularly useful for the SLAK procedures (Stromal Lenticule Addition Keratoplasty) in corneal ectasia, can be employed in any kind of intrastromal tissue augmentation procedures. designed by L. Mastropasqua M.D. Ph.D / M. Nubile M.D. Ph.D

J2409.3E

Spatola per delaminazione piani intrastromali nelle procedure refrattive e corneali. Ideale per delaminare i due piani intrastromali in procedura Smile®. Sottile con bordi leggermente smussi che permettono un delicato clivaggio sul tessuto stromale

Spatula for delamination of intrastromal layers in refractive and corneal procedures. Highly suggested to delaminate the two intrastromal layers in Smile® procedure. Thin and slightly bevelled edges allow a delicate cleavage on the stromal tissue. designed by L. Mastropasqua M.D. Ph.D / M. Nubile M.D.

J3158

Pinza per asportazione lenticolo stromale 3x2 denti retti, con azione verticale per procedura Smile®

Intrastromal forceps, vertical action to remove the stromal lenticule in Smile® procedure, 3x2 straight delicate teeth. designed by L. Mastropasqua M.D. Ph.D.

FEMTO REFRACTIVE SMILE® PROCEDURE STROMAL GRAFT REMOVAL FORCEPS

J3159 STROMAL LENTICLE REMOVAL SMILE® FORCEPS

Pinza per asportazione lenticolo stromale, procedura Smile®, in titanio

Forceps for stromal lenticle removal in Smile® procedure, titanium. designed by M. Surace M.D.

J3166 SMILE

Pinza per rimozione lenticolo, tecnica Relex®, in acciaio (MILLY smile)

Forceps for lenticle removal in Relex® procedure, stainless steel (MILLY smile). designed by Morselli M.D.

J2192.39A

Doppio strumento per procedura Smile®. Spatola per delaminare e scollare il flap e/o il lenticolo e uncino per sollevare l'incisione

Double ended instrument for Smile® procedure. Spatula for detachment and delamination of lenticle, hook for opening of the incision. designed by M. Surace M.D.

J2192.40A

Doppio strumento per procedura Smile®. Spatola A DISCO e uncino per sollevare l'incisione

Double ended instrument for Smile® procedure. DISK spatula for detachment and delamination of lenticle, hook for opening of the incision. designed by M. Surace M.D.

J2192.47A

Doppio strumento per procedura Smile® / Double ended instrument for Smile® procedure

J2192.37A

Disco-dissetto per apertura tasca intrastromale 1.5 mm, dorso leggermente curvo per procedura Smile®

Intrastromal pocket dissector, disk-shaped 1.5 mm, slightly curved, to open the intrastromal pocket in Smile® procedure designed by L. Mastropasqua M.D. Ph.D.

J2115.18A

Strumento con doppio terminale, per scollare e sollevare il flap corneale in tecnica LASIK. L'uncino delicato viene inserito nel solco per scollare i margini del flap. L'ansa allungata a forma di "C" e rastremata viene posizionata sotto il flap e lo solleva con un'azione di spinta sul piano orizzontale (dalla cerniera fino al punto d'uscita)

Double-ended instrument to unstick and lift the corneal flap in LASIK procedures. The delicate hook works at the flap edges inside the groove. The "C" shaped tapered loop, once positioned below the flap, lifts it with a gentle push on the horizontal plane (from the hinge to the exit point)

J2199.20A

Strumento con doppio terminale rastremato, per scollare e sollevare il flap corneale in tecnica LASIK. L'apice leggermente angolato viene inserito nel solco per scollare i margini del flap. Il secondo terminale lineare e rastremato viene posizionato sotto il flap e lo solleva con un'azione di spinta sul piano orizzontale (dalla cerniera fino al punto d'uscita)

Double-ended instrument tapered tips to unstick and lift the corneal flap in LASIK procedures. The angled tapered tip works at the flap edges inside the groove. The linear tapered tip, once positioned below the flap, lifts it under a gentle push on the horizontal plane (from the hinge to the point of exit). designed by Scaroni M.D.

J2114.16A

Strumento con doppio terminale, per scollare e sollevare il flap corneale in tecnica LASIK. L'uncino delicato viene inserito nel solco per scollare i margini del flap. Il terminale a forma di lancia sottile e delicata viene posizionata sotto il flap e lo solleva con un'azione di spinta sul piano orizzontale (dalla cerniera fino al punto d'uscita)

Double-ended instrument to unstick and lift the corneal flap in LASIK procedures. The delicate hook works at the flap edges inside the groove. The lanced shaped tip, once positioned below the flap, lifts it under a gentle push on the horizontal plane (from the hinge to the point of exit). designed by L. Buratto M.D.

J2114.10A

Strumento con doppio terminale, per scollare e sollevare il flap corneale in tecnica LASIK. L'apice angolato delicato viene inserito nel solco per scollare i margini del flap. Il terminale rastremato viene posizionato sotto il flap e lo solleva con un'azione di spinta sul piano orizzontale (dalla cerniera fino al punto d'uscita)

Double-ended instrument to unstick and lift the corneal flap in LASIK procedures. The delicate angled tip works at the flap edges inside the groove. The tapered straight tip, once positioned below the flap, lifts it under a gentle push on the horizontal plane (from the hinge to the point of exit)

J2114.11A

Strumento con doppio terminale rastremato, per sollevare il flap corneale in tecnica LASIK. Gli apici rastremati hanno lunghezza e angolazione differente. Il terminale più corto e meno angolato viene utilizzato per l'accesso nasale, mentre quello più lungo e più angolato viene utilizzato per l'accesso temporale. I terminali posizionati sotto il flap scollano e sollevano sotto un'azione di spinta il flap lungo il piano orizzontale (dalla cerniera fino al punto d'uscita)

Double-ended instrument to lift the corneal flap in LASIK procedures. The delicate tapered tips have different lengths and angles. The shortest tip, less angled, is used for temporal access, while the longest tip, with wider angle, is used for nasal access. Both tips, once positioned below the flap, lift it under a gentle push on the horizontal plane (from the hinge to the point of exit)

LASIK SPATULAS AND CANNULAS

J2114.1A

Spatola sottile e delicata per sollevamento e posizionamento del flap corneale per tecnica LASIK
LASIK spatula delicate for lifting and repositioning the corneal flap. designed by L. Buratto M.D.

J2114.15A

Strumento con doppio terminale, per scollare e sollevare il flap corneale in tecnica LASIK. L'uncino delicato viene inserito nel solco per scollare i margini del flap. Il terminale piatto viene posizionato sotto il flap e lo solleva con un'azione di spinta attraverso il lato più sottile della spatola (dalla cerniera fino al punto d'uscita)
Double-ended instrument, to detach and lift the corneal flap in LASIK technique. The delicate hook is inserted into the groove to detach the flap edge. The flat ended tip is positioned under the flap and lifts it with a gentle push provided by the thinner side of the spatula (from hinge to the exit point). designed by L. Buratto M.D.

J2186.4

Pinza per sollevamento del flap corneale con dischi atraumatici leggermente zigrinati
Corneal flap forceps, angled, with atraumatic, disc-shaped tips. designed by L. Buratto M.D.

J2641.53

Cannula per irrigazione flap corneale, 5 FORI, in tecnica lasik
Lasik irrigation cannula 5 PORTS, corneal flap, in lasik technique

J2641.37 DESTRA/RIGHT J2641.38 SINISTRA/LEFT

Cannula destra e sinistra per irrigazione epiflap corneale in tecnica LASIK, 5 fori di uscita. La cannula viene posizionata sotto il flap e con un'azione di movimento sul piano orizzontale effettua una perfetta idratazione
Right and left cannula for the irrigation of the corneal epiflap in LASIK. The 5 ports cannula is positioned under the flap and with the aid of a moving action along the horizontal plane provides adequate irrigation. designed by L. Buratto M.D.

J2641.44

Cannula per irrigazione flap corneale in tecnica LASIK, flautata, apertura sul fronte, Ø 26 braccio da 12 mm, leggermente angolato
LASIK Irrigating cannula, fluted-front opening, slightly curved, port Ø 26 gauge, 12 mm angle to tip

J2641.42

Cannula LASIK a doppio braccio, 8 fori. Consente lavaggio simultaneo dei 2 piani del flap corneale
LASIK cannula with double arm and 8 side ports. allows simultaneous washing of anterior and posterior side of the corneal flap

LASEK PROCEDURE

J2294

Alcohol well with suction. Ø 9.0 mm. designed by Vinciguerra M.D.

STERILE EO

JD2654

Siringa monouso con molla per suzione (da usare con J2294) / Single use vacuum syringe with spring (to be used with J2294)
Disponibile anche nella versione monouso JCP0003 / Also available in the disposable version JCP0003

J2900

Trapano epiteliale, tecnica LASEK. Ø 8.0 mm, con cerniera e profondità calibrata
Epithelial trephine for LASEK procedure, Ø 8.0 mm, with hinge and calibrated depth, J2901 Ø 9.0 mm. designed by Camellin M.D.

J2907

Contenitore per soluzione alcolica, tecnica LASEK, Ø 9.0 mm
Alcohol well for LASEK procedure, Ø 9.0 mm. designed by Shahinian M.D.

J2916A

Spatola per scollamento flap epiteliale, tecnica LASEK
Epithelial detaching spatula for LASEK procedure. designed by Camellin M.D.

J2910A

Spatola per scollamento flap epiteliale, tecnica LASEK
Epithelial detaching spatula for LASEK procedure. designed by Camellin M.D.

J2920A

Spatola smussa per riposizionamento flap epiteliale, tecnica LASEK
Blunt spatula for repositioning of the epithelial flap for LASEK procedure. designed by Camellin M.D.

J2930A

Scollatore flap epiteliale, in tecnica LASEK. Inserito sotto il punto distale scolla il flap di epitelio sotto una leggera trazione lungo il piano orizzontale (dal punto distale alla cerniera)
Bow-dissector for LASEK procedure. Once positioned below the epithelial flap it allows to unstick the flap under a gentle pull on the horizontal plane (from the distal point to the hinge). designed by Camellin M.D.

J2294.91S Corneal Marker (Provides a circle mark on the cornea)

Marcatore corneale a croce utile al chirurgo per una esatta centratura

A cross-hair helps surgeons to put a corneal mark on a target position precisely

J2186.91 Kamra® Inlay Inserting Forceps

Pinza per caricamento ed inserimento del dispositivo Kamra® Inlay che aiuta il chirurgo durante questa procedura. Il particolare ed unico design della pinza realizzata dal Dr. Tomita minimizza lo stress all'interno della tasca corneale velocizzando il recupero visivo del paziente

Kamra® Inlay Inserting Forceps has a cross-hair on the bottom side of the forceps to help surgeons inserting Kamra® Inlay easily and smoothly into a target position. Dr. Tomita's unique design curved forceps make minimum stress on the pocket incision and fasten patients' visual recovery

J2292.91 LASIK Flap Edge and Corneal Limbus Marker

Doppio marcatore per limbus e per flap corneale in LASIK.

Importante per il chirurgo creare l'incisione della tasca esterna-al flap corneale in LASIK

Double marker for limbus and corneal flaps in LASIK procedure.

It is extremely important for surgeons to make a pocket incision outside of LASIK flap

J2114.91A Inlay Positioner

Spatola per posizionamento del Kamra® Inlay all'interno della tasca intrastromale.

Lato inferiore leggermente zigrinato per una perfetta adesione della spatola al dispositivo

Inlay Positioner for repositioning Kamra Inlay has friction on its bottom side. Once Kamra® Inlay is inserted into a pocket, it is difficult for surgeons to reposition the Kamra® Inlay. This friction helps the surgeons to move the Kamra Inlay into a target position smoothly and precisely with minimum invasion

J2180.91A Hook for Kamra® Inlay implantation

Uncino smusso creato per aprire la tasca intrastromale dall'incisione facilitando l'introduzione del dispositivo Kamra® Inlay

This hook is to open the pocket sidecut and to lift the incision while inserting Dissector, Kamra® Inlay Inserting Forceps and Positioner

J2192.91A Dissector for Kamra® Inlay implantation

Dissetto per tasca intrastromale. Il particolare design con curvatura e sottigliezza del dissetto consente una delicata dissezione della tasca evitando stress dell'incisione principale

Intrastromal pocket dissector. The unique design, curvature and thickness of this dissector allows comfortable dissection. Of the pocket without stressing the incision

ICL COAXIAL FORCEPS DESIGNED BY AUS DER AU D.M.

J3864.1 Aus Der Au M.D. ★ BEST SELLER

pinza coassiale per caricamento icl™ all'interno del cartridge, presa angolata, atraumatica.

Apertura tips parallela alla chiusura del manico

ICL™ loading coaxial forceps, atraumatic angled tips. **Tips opening parallel to the closing mechanism of the squeeze handle**

J3864.1R Aus Der Au M.D.

Pinza coassiale per caricamento ICL™ all'interno del cartridge, presa angolata, atraumatica.

Apertura tips perpendicolare alla chiusura del manico

ICL™ loading coaxial forceps, atraumatic angled tips. **Tips opening perpendicular to the closing mechanism of the squeeze handle**

ICL DISPOSABLE FORCEPS

JD3864.1 Aus Der Au M.D.

Pinza monouso per il caricamento nel cartridge della lente ICL™. 5 unità per scatola

ICL™ disposable forceps for cartridge loading. 5 units for box

JDICL ICL SET

5 PER BOX STERILE

**set composto da:
includes**

- . Pinza per il caricamento nel cartridge della lente ICL™ / ICL™ forceps, for cartridge loading
- . Spatola a disco per lente ICL™ / Disc-shape spatula for ICL™

ICL COAXIAL FORCEPS DESIGNED BY M. TOMITA M.D.

J3864.2

Pinza coassiale per caricamento ICL™ con presa sabbata, angolata. Permette una presa stabile e sicura sulla flangia della IOL

ICL™ loading coaxial forceps, sandblasted angled tips. It allows a better gripping on the IOLs designed by Minoru Tomita, M.D., Ph.D.

ICL ADDITIONAL TOOLS

J2197.2A

Spatola angolata atraumatica, delicata sezione piatta leggermente curva per posizionamento lente ICL™ in camera posteriore
Spatula, slightly curved, flat delicate tip for positioning ICL™ lens

J2197.3A

Uncino delicato smusso per posizionamento lente ICL™ in camera posteriore
Atraumatic blunt hook, for positioning ICL™ lens

J2197.1A

Manipolatore per lenti ICL™, apice a disco piatto, atraumatico
ICL™ lens manipulator, flat atraumatic disc-shaped tip

J2188.30

Pinza per caricamento IOL nel cartridge, branche cilindriche da 11 mm
Foldable lens cartridge loading forceps 11 mm angle to tip cylindrical arms. designed by P. Crozafon® M.D.

ICL DISPOSABLE TOOLS

STERILE EO

JD2184.2.1A/10

Spatola monouso a disco per lente ICL™. 10 unità per scatola
Disposable spatula for ICL™. 10 units for box

JDS2188.2/10

Pinza monouso per caricamento lente ICL™, angolata, branche sottili da 13 mm. 10 unità per scatola
ICL™ angled loading disposable forceps, delicate tips. 13 mm long thin blades. 10 units for box

IRIS AND SCLERAL FIXATED IOL INSTRUMENTS

NEW

J3869.1

Pinza holder coassiale 23G, gambo leggermente curvo, per lente a fissazione sclerale con anse T-shape/ancora. Il design della pinza permette di abbracciare delicatamente alla base, le anse della lente (IOL) gestendone l'inserimento delle stesse attraverso gli accessi sclerali. L'impianto della IOL risulta essere sicuro e garantisce la ripetibilità

23G coaxial holder, slightly curved shaft, for scleral fixation lenses with T-shape/anchor loops. The design of the forceps allows you to gently embrace the loops of the lens (IOL) at the base, managing the insertion through the scleral incisions. The implantation of the IOL results in safety and ensures repeatability. designed by A. Pioppo M.D.

J3009.20L

Holder coassiale 20G per IOL fachiche / 20G coaxial holder for phakic IOL. designed by L. Buratto M.D.

J3001

Holder coassiale per iniezione di IOL fachica pieghevole a fissazione iridea

Coaxial holder for enclavation of foldable iris-fixated phakic IOLs. Designed by L. Buratto M.D.

J3009.1

Pinza holder per IOL fachiche a fissazione iridea / Phakic IOL holder

J2174A

Posizionatore per IOL fachiche a fissazione iridea / Phakic IOL manipulator

J2175A

Doppio uncino per iniezione di IOL fachiche a fissazione iridea / Double hook for enclavation of iris-fixated phakic IOLs

J2186.50 RIGHT/ J2186.52 LEFT

Pinza per impianto IOL pieghevoli a fissazione iridea, branche lunghe

Implantation forceps for foldable iris-fixated IOL, long tip. designed by F. Carones M.D.

PRK PHOTO REFRACTIVE KERATOMY

J2112A

Spatola per depitelizzazione per PRK / Epithelium removal spatula, for PRK. designed by Vinciguerra M.D.

J2296.20

Doppio marcatore corneale per DSEK, Ø 8.0 mm, Ø 9.0 mm / Double-ended corneal marker for DSEK, Ø 8.0 mm, Ø 9.0 mm

J2641.44

Cannula per irrigazione flap corneale in tecnica LASIK, flautata, apertura sul fronte, Ø 26 braccio da 12 mm, leggermente angolato
LASIK Irrigating cannula, fluted-front opening, slightly curved, port Ø 26 gauge, 12 mm angle to tip. designed by Slade M.D.

JCP0002 PRK PHOTO REFRACTIVE KERATOMY SET

5 PER BOX STERILE

**set composto da:
includes:**

- . Blefarostato reversibile, valve piene. in polimero medicale / Reverse speculum, solid blade. medical polymer. latex-free
- . Spatola per depitelizzazione / Spatula for epithelium removal
- . Marcatore per zona ottica, Ø 9.0 mm / Corneal marker, Ø 9.0 mm
- . Cannula per irrigazione curva, apertura sul fronte. Per PRK/LASIK / PRK/LASIK irrigation cannula. Curved and flat, front opening

STERILE EO

PRK/CXL DISPOSABLE HOCKEY SPATOLA

STERILE EO

JD2112/10

Spatola monouso hockey per depitelizzazione PRK, consigliata anche per procedure di DSEK/DSAEK, Slam e Pterigio
Hockey disposable spatula for epithelium removal, suggested for PRK DSEK/DSAEK, Slam and Pterygium

LRI LIMBAL RELAXING INCISION DIAMOND KNIFE

bisturi in diamante per incisioni arcuate nel rilassamento limbare

J6800
J6801
J6804

singola profondità di taglio preselezionata

Lama retta a lancia tri-facet, double bevel, manico a baionetta in titanio

single cutting depth

three-preselectable cutting depths

Double bevel, tri-facet straight blade, titanium handle with micrometer

Order No	S	B	L	D	A
ME425	0.2	0.8	3.5	0.1	15°

J2292.11

Marcatori per astigmatismo

Marcatore limbare per astigmatismo, Ø 11 mm, con marcature a 80° - 100° (Da utilizzare con J 2295.5). designed By Zaldivar/L. Buratto M.D.

Astigmatism markers

Arcuate incision marker, Ø 11 mm markings at 80° - 100° (To be used with J2295.5)

J2292.13

Marcatore limbare per astigmatismo, con marcature a 0° - 35° - 45° - 55° designed By Fazio M.D.

Arcuate incision marker, markings at 0° - 35° - 45° - 55°

FORBICI / SCISSORS

J3009.09

Microforbice multiuso 23G per Camera Anteriore, TAGLIO ORIZZONTALE, gambo curvo. Consigliata anche per sinechie aderenti
 23G multipurpose microscissors, for Anterior Chamber surgery, HORIZONTAL CUT, curved shaft.
 Also recommended for adherent synechiae

J3009.10

Microforbice multifunzione 23G per Camera Anteriore. Lame delicate, sottili, TAGLIO VERTICALE, gambo curvo.
 Utile per ressi secondarie e sfinterotomia iridea

23G multipurpose microscissors, for Anterior Chamber surgery, VERTICAL CUT, curved shaft. Useful for capsulorrhexis correction and IRIS sphincterotomy

J3840.23

Microforbice vitreale, 23G, branche curve, manico in titanio / Vitreous scissors, 23G, lightly curved jaws, titanium handle

PINZE / FORCEPS

J3009.11

Micropinza multiuso, da Camera Anteriore curva, 23G, manico in titanio, gambo curvo
 Multipurpose forceps, curve, 23G, titanium handle, curved shaft

J3839.1.23

Pinza vitreale da 23G con presa coccodrillo, gambo curvo. Utile nella chirurgia di Camera Anteriore, come holder nella rimozione delle IOL, o come micro port'aghi nella sutura iridea

Useful in Anterior Chamber surgery. It can be used as a holder when the IOL is removed as well as needle holder in IRIS suturing

J3009.12

Micropinza multiuso, da Camera Anteriore curva, punta angolata, 23G, manico in titanio
 Multipurpose forceps, curve, 23G, angled tip, titanium handle. designed By L. Buratto M.D.

J3276L

Micropinza coassiale Mc Pherson 23G. Consigliata per la chirurgia di Camera Anteriore.
 Utile per il posizionamento delle IOL (loops) in Camera Anteriore, per la gestione delle IOL fatiche e per suture iridee
 23G Coaxial micro forceps Mc Pherson. The forceps is suggested to perform Anterior Chamber surgery.
 Useful to manage IOL into the Anterior Chamber and fix the suture of the IRIS. designed By L. Buratto M.D.

IOL REMOVAL

J1692

Forbice delicata per espianato IOL, angolata, lame da 6 mm, in titanio. Lama inferiore dentellata per trattenere la IOL durante il taglio

Cutting scissors for removal IOL, angled, 6 mm long, delicate blades, titanium.

Serrated lower blade to hold the IOL while cutting

J3873L

Pinza **holder** coassiale 20G per rimozione IOL (da utilizzare con J3872L)

20G coaxial **holder** for IOL removal (to be used with IOL removal microscissors J3872L)

J3872L

Microforbice coassiale 19G, per rimozione IOL, curva (da utilizzare con supporto J3873L)

Da utilizzare solo con lenti morbide in silicone

IOL removal 19G coaxial microscissors (to be used with holder J3873L). To be used for soft silicon IOLs only

soft silicon IOLs

J2188.42

Pinza **holder** per espianato IOL, angolata 13 mm, apici zigrinati 5 mm per afferrare con sicurezza il disco ottico durante il taglio

Holder forceps with 5 mm serrated tips, 13 mm angled to tip, titanium. Useful to better fix the optical' lense when is removed

J3871

Microforbice coassiale per taglio anse IOL, 20G, in titanio / Coaxial Haptic Cutter, 20G, titanium handle

I/A Simcoe .reverse. J2264.31

Infusione da Ø 0.60 mm, foro frontale flautato, dal raccordo principale aspirazione da Ø 0.60 mm, con foro superiore Ø 0.35 mm, dal raccordo laterale con tubicino in silicone
 23G irrigation cannula, fluted-front opening, through needle hub
 23G aspiration cannula with 28 G port, through silicone tubing

Snellen J2590

Ansa zigrinata, da 5 mm / Serrated lens loop, 5 mm wide

Snellen J2592

Ansa zigrinata, da 4 mm / Serrated lens loop, 4 mm wide

Montericcio J2173

Uncino per estrazione del nucleo. Da utilizzare con le anse per rimozione nucleo
 Nucleus lens extractor hook. To be used with lens loops to remove the nucleus

Daviel J2510.2

Cucchiaio sostenitore per espressione del nucleo, da 2.5 mm. Da utilizzare con le anse per rimozione nucleo
 Sustaining spoon and nucleus extractor, 2.5 mm wide. To be used with lens loops to remove entire nucleus

JDIOLEXP EXTRACTION IOL SET

5 PER BOX STERILE

**set composto da:
 includes:**

. Forbice per taglio IOL da rimuovere, angolata, lame delicate da 6 mm, lama inferiore dentellata
 Scissors for removal of IOL, angled, 6 mm long, delicate blades, with serrated lower blade

. Pinza holder per espianto IOL, angolata 13mm, apici zigrinati 5mm
 IOL extraction forceps, angled, strongly serrated

. Uncino reverse / Reverse hook

J3025

Pinza per congiuntiva con presa ad anelli, **atraumatica**

Atraumatic conjunctiva forceps, ring shaped tips, titanium

J2863

Punch per membrana di Descemet, **Ø 1 mm**, modello Kelly

Descemet membrane punch, **Ø 1 mm**, by Kelly

CANABRAVA RING

CANA-RING

Dispositivo non pre-caricato. Semplifica la facoemulsificazione e gli interventi chirurgici in cui la dilatazione farmacologica della pupilla non è sufficiente.

- Anello semicircolare a 300° con apertura a 60° realizzato in un unico pezzo
- Non richiede iniettore
- Facile da inserire e rimuovere
- L'anello può essere inserito attraverso incisioni inferiori a 2 mm
- Facile da inserire in pupille di dimensioni inferiori a 4.5 mm
- Ottima visibilità
- Dispositivo monouso, non può essere risterilizzato

STERILE EO

It simplifies phacoemulsification and surgical interventions in which the pharmacological dilation of the pupil is not sufficient.

- Semicircular 300° ring with opening at 60°, ring in single piece
- Injector non needed
- Easy insertion and removal
- The ring can be inserted through incisions less than 2 mm
- Easy to fit into pupils less than 4.5 mm diameted
- Excellent visibility
- Single use device / cannot be resterilized

AJL BBG OPHTHALMIC SOLUTION

COLORANTE PER SEGMENTO POSTERIORE

AJL-BBG 0.25% è una soluzione oftalmica sterile, apirogena, isotonica, pronta per l'uso in chirurgia vitreoretinica nel segmento posteriore. La soluzione BBG è in grado di colorare efficacemente la membrana limitante interna (ILM)

STERILE

AJL BBG 0.025% is an ophthalmic sterile, non-pyrogenic, isotonic solution, ready for use in vitreoretinal surgery. The BBG solution is capable of effectively staining

AJL BLUE OPHTHALMIC SOLUTION

COLORANTE PER SEGMENTO ANTERIORE

AJL-BLUE 0.06% è una soluzione oftalmica sterile di trypan blue, intraoculare e biocompatibile utilizzata nella chirurgia oftalmica del segmento anteriore. Questo colorante oftalmico viene utilizzato come coadiuvante nelle capsuloressi e minimizza il rischio di lacerazione negli occhi con cataratta matura, o con piccole pupille

STERILE EO

AJL-BLUE 0.06% is an ophthalmic sterile trypan blue solution, intraocular and biocompatible used in ophthalmic surgery of the anterior segment. This ophthalmic dye is used as acoadjuvant during capsulorhexis and minimises the risk of laceration in eyes with mature cataracts or with small pupils

AJL CAPSULAR TENSION RING

profilo sezione stondata

profilo sezione squadrata

AC / AC-PL RINGS - ACS / ACS-PL RINGS

Dispositivo pre-caricato progettato per essere inserito nel sacco capsulare durante l'intervento di cataratta, allo scopo di distendere il sacco equatorialmente e successivamente stabilizzandolo durante e dopo la procedura. Disponibile con **profilo (sezione) stondata e/o squadrata**. Utilizzato in pazienti che presentano:

- Debolezza zonale primaria o secondaria
- Zonolisi parziale
- Traumi
- Sindrome da pseudoesfoliazione
- Previene il rischio di retrazione capsulare (ad es. uveite)

STERILE EO

- Favorisce la centratura e la stabilizzazione delle lenti intraoculari
- Diminuisce della cicatrizzazione del sacco capsulare asimmetrico
- Previene la fibrosi e la contrazione della capsula anteriore
- Stabilizza la capsula nei casi di miopia elevata

IRIS EXPANDER

Dispositivo pre-caricato che permette l'espansione delle pupille non sufficientemente dilatate durante gli interventi oftalmici, garantendo visibilità ottimale durante la procedura.

- Visualizzazione ottimale negli interventi chirurgici più complicati sulla pupilla
- I profili angolari consentono di catturare delicatamente il tessuto oculare senza pizzicarlo o danneggiarlo.

- Una volta rimossa, l'iride ritorna alla sua naturale posizione e funzionalità
- Utilizzato nella gestione della sindrome dell'iride a bandiera (IFIS)
- Facile rimozione senza potenziali lacerazioni

OA9625 Ø 6.25 mm, **5 unità per scatola**
OA9625S Ø 6.25 mm, **1 unità per scatola**
OA9700 Ø 7.00 mm, **5 unità per scatola**
OA9700S Ø 7.00 mm, **1 unità per scatola**

PUNCTUM PLUG IN SILICONE
PLUGS PER VIE LACRIMALI

OCCLUSIONE A LUNGO TERMINE
Il caratteristico cappuccio a basso profilo combinato con un silicone più morbido e flessibile massimizza il comfort del paziente. Ora disponibile con due opzioni di inserimento. Il dispositivo **SOFT PLUG®** risulta rimovibile con

una pinza come riportato nelle istruzioni per l'uso

OA6610 Micro - 2pk, 0.4 mm
OA6611 Mini - 2pk, 0.5 mm
OA6612 Petite - 2pk, 0.6 mm
OA6613 Small - 2pk, 0.7 mm
OA6614 Medium - 2pk, 0.8 mm

PUNCTUM PLUG IN SILICONE
CON CONTROLLO DI FLUSSO
PLUGS PER VIE LACRIMALI

OCCLUSIONE A LUNGO TERMINE
CON DRENAGGIO PARZIALE
Il caratteristico cappuccio a basso profilo combinato con un silicone più morbido e flessibile massimizza il comfort del paziente. L'inseritore riduce al minimo il rischio di rilascio accidentale del plug. Il plug è progettato con un canale centrale

che consente un flusso lacrimale parziale. I **SOFT PLUG®** con controllo di flusso sono rimovibili con una pinza (vedi istruzioni per l'uso)

OA6612-FC Petite - 2pk, 0.6 mm
OA6613-FC Small - 2pk, 0.7 mm
OA6614-FC Medium - 2pk, 0.8 mm

VSY OPHTHALMIC SOLUTION

NaHA bio-fermentato in 7 diverse concentrazioni, facile da iniettare e rimuovere

- Mantenimento affidabile della camera anteriore
- Protezione endoteliale migliorata
- Eccezionale comportamento coesivo
- Non immunogeno
- Apirogeno
- Eccezionale trasparenza
- Non è richiesta refrigerazione (da 2° a 25°)
- Concentrazioni disponibili: 1.0%, 1.2%, 1.4%, 1.6%, 1.8%, 2.0% coesivo e 3.0% dispersivo
- 1.1 ml di riempimento volume

Dual pack contenente:

- una soluzione viscoelastica coesiva
- una soluzione viscoelastica dispersiva
- Non è richiesta refrigerazione
- Eccellente Biocompatibilità
- Doppia sterilizzazione
- Non immunogenico
- Non pirogenico
- Latex Free
